

Digitron 97

The Funki DIGITRON 97 Controller is the answer for complete climate control at a realistic cost.

Funki have developed the DIGITRON 97 which is simple to use and as user friendly as possible. After entering the required settings only the desired temperature has to be adjusted.

DIGITRON 97 is the computer for the farmer who wants optimum climate control for his flock with complete reliability.

External temperatures are monitored and automatic compensation is made to maintain house conditions.

Special winter control curves have been incorporated to overcome the possibility of cold air falling to the stock.

The DIGITRON 97 is designed to operate with all Turbovent equipment but is also compatible with systems by other manufacturers.

Functions

- 220/240 mains voltage
- 10 amp. motor output
- Output for additional motor regulators
- Infinitely variable connection of several fans
- Built in by-pass facility
- Double regulation (temperature and humidity)
- Possibility of adding additional sensors
- Sensor calibration
- Control of humidity with or without adding heat
- Minimum ventilation
- Decrease of temperature and increase of humidity
- 6 point control of operating curve
- Control of heat
- Compensation of outside temperature
- Operation of damper opening according to outside temp.
- Min/Max. temperature recording
- Automatic ventilation in event of sensor failure
- Automatic stop in case of low temperature
- Built in alarm
- Battery back up to retain settings during power failure
- EMC tested - CE marked
