

MR 9710

Speed Regulator

Funki Speed Regulator is a newly developed product.

The MR 9710 is very reliable and user friendly.

The Speed Regulator MR 9710 is controlled via a 0 - 10V signal from a controller and can be used in a equal pressure system or in a low pressure system where the number of fans take more power than the main controller can deliver.

New:

The Speed Regulator can control the pig heaters according to reverse function, this means when the temperature falls the heat supply increases and at rising temperatures the heat supply decreases.

The Speed Regulator MR 9710 is fully compatible with all Funki systems as well as being suitable for equipment by other manufacturers.

Functions

- 220 V mains voltage
- 10 amp. output for motors
- 0 - 10 V DC control voltage
- 10 - 0 V DC control voltage
- Automatic stop on control signal
- Adjustable minimum voltage
- Adjustable maximum voltage
- EMC tested and CE marked
