| VD6 FEED DISPENSER |

Plastic feed dispenser for 60 mm system with capacity up to 6 or 8 liter

New feed dispenser with our well-known release system with flap. The system can release feed with minimum force. Simple design, but at the same time good functionality and a competitive price.

The release system is combined with a slide allowing adjustment of the feed amount even when having feed in the dispenser.

The feed dispenser has two inspection lids: at the top and the bottom. The top lid allows easy additional nutritional supplements or medication as well as cleaning. The bottom lid is located under the bottom flap and makes the feed dispenser extremely easy to clean.

The feed dispenser has an extra lock function which makes it possible to exclude a single specific dispenser from feeding.

The bottom part of the feed dispenser can be mounted in four positions/directions.
