Accurate monitoring of pigs' growth

Continuous monitoring of your pigs provides a wealth of information about the growth, the feeding plan, the slaughter data and the actual results. The scale can be placed anywhere in the pen and it is attached to the floor. It can also be used as a "stand alone" device.

This provides a complete knowledge of your pigs' performance at any time of the day and follows their growth day by day. It enables you to deliver all the pigs at the right weight.

- Easy installation
- Can be placed in one pen or between two pens
- Free access for animals
- No stress
- Fully automatic system
- Connects directly to Funki MultiController

Funki Opti Scale is available in two models - one for weaners and a larger model for finishers. It can be placed anywhere in the pen and is attached to the floor. The scale detects if there is only one pig on the scale, and sorts the data if there are several pigs on it.
