## UV LIGHT

- UV light is a supplement to good hygiene
- Simple and effective
- Works optimally with a well-functioning sprinkler system
- The system is acid resistant and works at all temperatures
- Lighting radius is about 60-100 cm
- The UV light is mounted vertically in the top of the tank and reaches 31 cm into the tank
- Must be mounted so that persons can not accidentally look into the light
- Lamp life is minimum 10,000 hours
- The lamp can be controlled from the outside through the plastic cap
